

LAB 1 – REQUIREMENTS TABLE

Automated Rubric Assignment Evaluator

Type	Description	Priority	Acceptance Criteria	Rationale	Comments
Functional	The system automatically queue uploaded student project ZIP files execute pre-configured unit test suites, and generate an itemized rubric score breakdown.	High	Pass: Rubric breakdown is rendered with test results within 10 seconds of submission. Fail: File queue stalls or rubric tally is invalid.	Core automated evaluation workflow.	Given in problem statement.
Functional	The system shall validate an uploaded student project ZIP file before adding it to the evaluation queue and shall notify the Student if the submission is invalid.	High	Pass: A valid ZIP file is accepted and queued. Fail: An invalid or unreadable ZIP file is accepted into the queue.	Prevents invalid submissions from entering the evaluation process.	Derived from the submission workflow.
Functional	The system shall display the test results and itemized rubric score breakdown for each completed submission to the Faculty Evaluator.	High	Pass: The Faculty Evaluator can view the test results and rubric score breakdown for every completed evaluation. Fail: Either result is unavailable.	Helps the evaluator review the automated assessment.	Derived from the evaluation workflow.
Functional	The system shall automatically assign eligible student submissions to peer reviewers without requiring manual distribution by the Faculty Evaluator.	High	Pass: Every eligible submission receives a peer-review assignment. Fail: Any eligible submission remains unassigned.	Reduces manual peer-review distribution effort.	Directly supported by the problem context.
Functional	The system shall allow the Student to view the evaluation result and the peer-review assignment for the submitted project.	Medium	Pass: The Student can view the evaluation result and peer-review assignment after processing. Fail: Either item cannot be accessed.	Gives students access to their evaluation outcome.	Derived from the stated Student actor.
Nonfunctional (For performance and security)	The system shall handle up to 100 concurrent project submissions without dropping queue items or exceeding a 1.5 GB memory footprint.	High	Pass: Benchmarking with 100 concurrent submissions shows no dropped queue items and memory usage remains at or below 1.5 GB. Fail: Queue items are dropped or memory exceeds 1.5 GB.	Ensures reliable operation during peak load.	Given in problem statement.

Type	Description	Priority	Acceptance Criteria	Rationale	Comments
Nonfunctional (For security)	The system shall restrict submission results and peer-review information to authorized users according to their roles.	High	Pass: Students can access only their own results and authorized Faculty Evaluators can access permitted submissions. Fail: An unauthorized user can access restricted information.(Students should not be able to access others other student results)	Protects student submissions and evaluation information.	Security requirement derived from the system
