

LAB 1 – USE-CASE FLOW SPECIFICATION

Use Case: UC-03 – Evaluate Submission

Primary Actor: Faculty Evaluator

1. Preconditions

1. The Student has uploaded a project ZIP file.
2. The submitted project has been successfully added to the evaluation queue.
3. The required unit test suite and evaluation rubric are pre-configured in the system.

2. Postconditions

1. The submitted project has been evaluated.
2. The system has generated an itemized rubric score breakdown with test results.
3. The evaluation result is stored and available to the authorized Faculty Evaluator.
4. The submission is ready for peer-review assignment.

3. Main Success Scenario

1. The Faculty Evaluator selects a queued student project for evaluation.
2. The system retrieves the selected project from the evaluation queue.
3. The system executes the pre-configured unit test suite on the submitted project.
4. The system collects the test execution results.
5. The system applies the configured rubric to the test results and generates an itemized rubric score breakdown.
6. The system stores the evaluation result.
7. The system displays the test results and rubric score breakdown to the Faculty Evaluator.
8. The system marks the submission as ready for peer-review assignment.
9. The use case ends successfully.

4. Alternate Flow – Test Execution Failure

3a. Test execution fails

1. The system detects an error while executing the test suite.
2. The system records the test execution error for the submission.
3. The system marks the evaluation as incomplete.
4. The system displays the failure status and error information to the Faculty Evaluator.
5. The Faculty Evaluator may retry the evaluation after resolving the issue.
6. The use case ends with an unsuccessful evaluation attempt.
